

# Birds in Flight Models

johnmuirlaws.com

Some Assembly Required...

1. Print this page on to card stock paper. Regular paper is OK but stiff card stock will be much better!
2. Cut out bird shapes along their outline.
3. Fold valley and mountain folds as indicated. A mountain folds makes a raised crease with the two sides sloping down, away from the fold. A valley fold makes a crease at the bottom, with the two sides sloping up, away from the fold.
4. Pinch the two sides of the head together and connect them with a small piece of tape on the underside of the head only. Leave the top of the head open or the wings will tilt forward.
